1 Disclaimer

This report has been essentially written to gather some knowledge about techniques and tools used to solve the challenges. The order in this document is similar to the validation order by team members on the CTF website. When possible, authors tried to indicate references if a challenge required some information from another challenge.

2 Enigmas

2.1 Rules

Goal : Before you begin, please read the attached rules and then write the agreement to begin the CTF.

A few rules for a participant to an OSINT-based CTF. The agreement is the last section of the document.

Engagement rules

HEXA OSINT CTF V3 is an online investigation game in which you are OSINT investigators. For everyone to have a good time during their investigation, here are some rules every contestant agrees to abide by participating to HEXA OSINT CTF V3:

General rules

Flag - Rules

2.2 Ah shit, here we go again !

Goal : Please find attached the context about last investigations related to this one. Read carefully these elements, as they are crucial to understand what is going on here.

A few elements in case we haven't participated in previous editions. We'll see later that we should have read a bit more carefully to connect the v3 CTF story with v1 and v2. The flag is clearly written in the rules.

Flag - Ah shit, here we go again !

2.3 Crime Scene

Goal : Dear agents, Here is the preliminary investigation report. As you may know, lab guys thinks we all are chemistry specialist... They provided an image of a molecule in this report. But as is, we cannot know if this is a relevant element or not. As you work on this, we will try to find the names of the interviewees and the name of the person she was talking to during lunch. Could you please find the molecule name so we can move forward in the investigation.

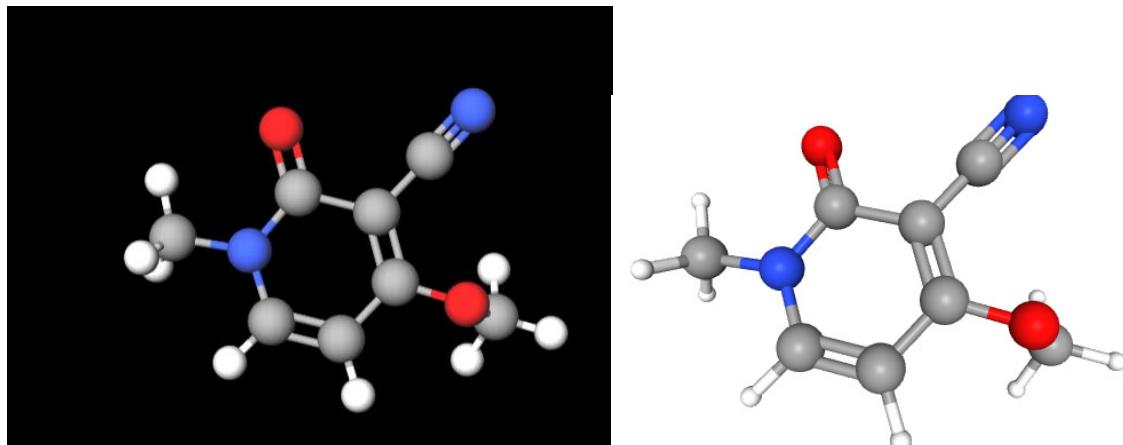

We have the death report of Lucilhe Demarquais. A few elements to remember:

- Date and Time of Incident: April 10, 2024, 14:30 hours
- Location: Women's Detention Facility, [REDACTED], France
- Victim: Lucilhe Dumarquais (female, age 31)

We are asked to find the name of a molecule. This challenge could be done in two ways: image recognition task (one thing to remember: do not hesitate to test several search engines) or chemical formula identification. The formula of this molecule is :

C8H8N2O2

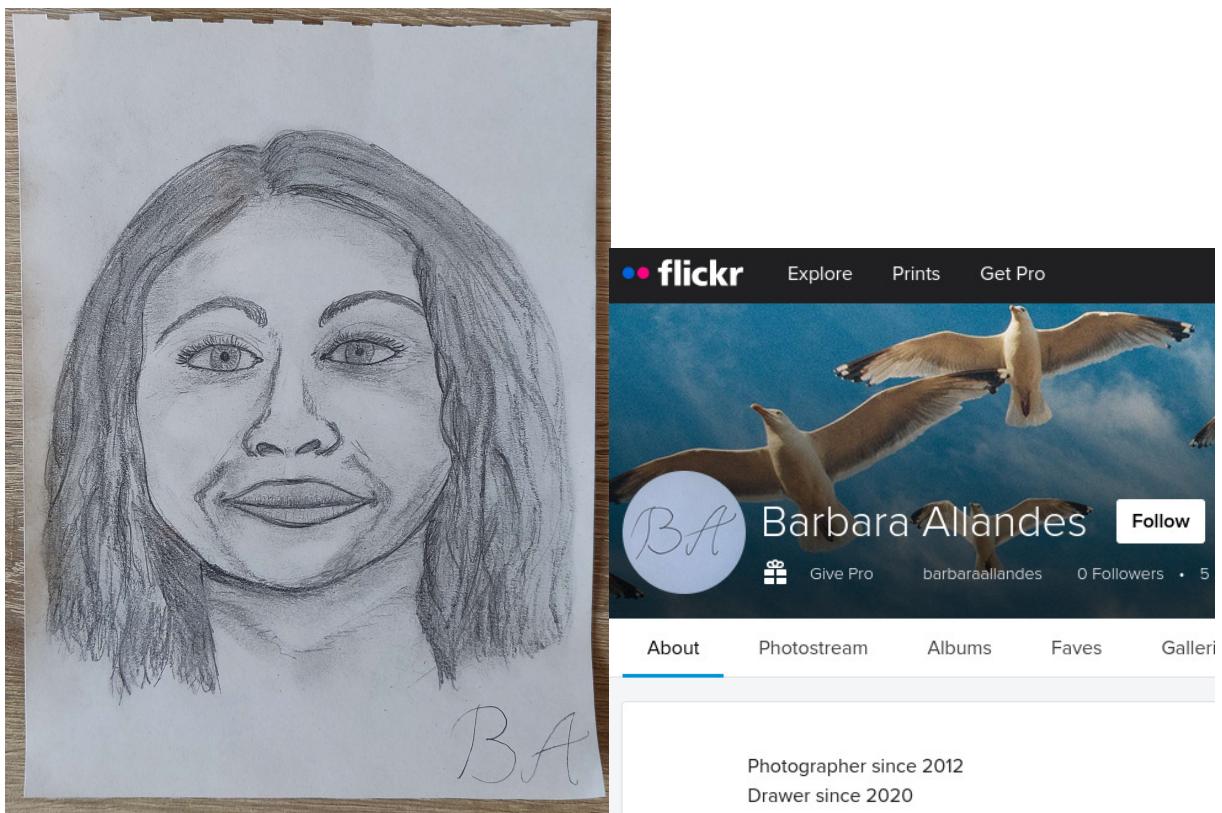

A quick Google search leads us to the National Library of Medicine website with a nice 3D viewer <https://pubchem.ncbi.nlm.nih.gov/compound/Ricinine> (left: given picture, right: found picture).

Flag - Crime Scene

2.4 Duck sauce

Goal : The person Lucilhe was talking to before her death is called Barbara Allandes. She was serving a 4-month prison sentence for being involved in a pyramid scam. She is a quiet person described by other inmates as “a weird artist”. We discovered a portrait created by B. Allandes in Lucilhe’s cell. She was interviewed but she didn’t tell us anything interesting. As she is suspicious, we would like to investigate her. Could you determine the year from which she has been drawing?.

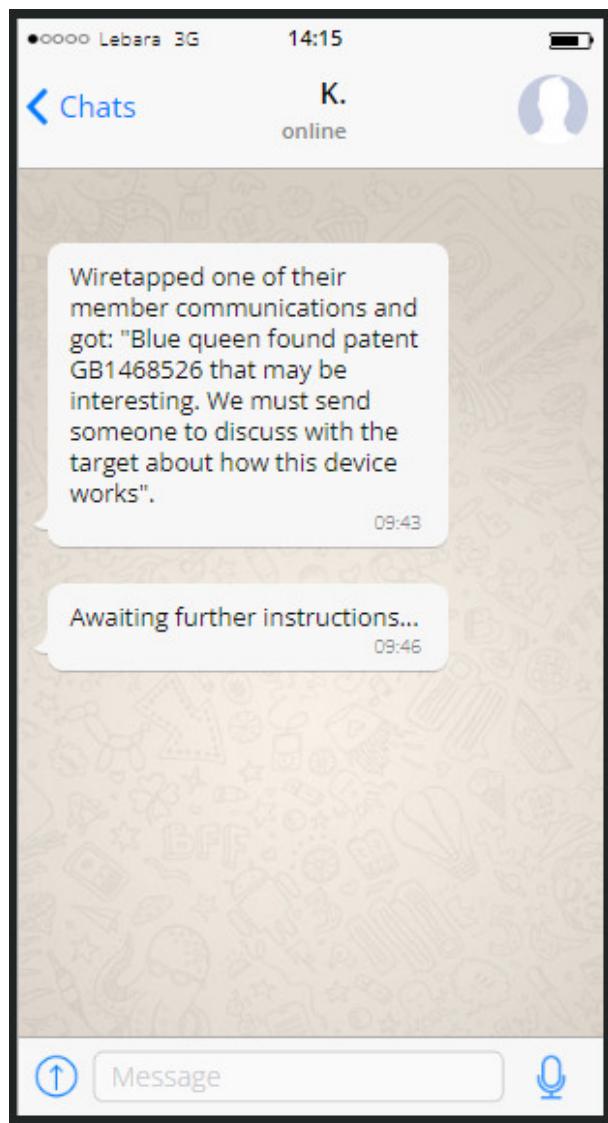

Quick search with [Barbara Allandes](https://www.flickr.com/people/200335437@N02/) leads us to a Flickr account: <https://www.flickr.com/people/200335437@N02/>

Flag - Duck sauce

2.5 ...her

Goal: The recovery of Lucilhe's encrypted phone marks a pivotal breakthrough in our investigation. Our dedicated technicians are tirelessly working to extract vital data from it. Thus far, we have successfully retrieved screenshots from a conversation. Herein lies the second segment of this crucial exchange. Your task: unveil the identity of the patent filer, a pivotal piece in this intricate puzzle.

Google Patent didn't give a clear answer. We had to go through [Espacenet](#), a European Patent Office website.

<https://worldwide.espacenet.com/patent/search/family/009853641/publication/GB1468526A?q=pn%3DGB1468526A>

The screenshot shows the Espacenet Patent search interface. The search bar at the top contains the query "pn=GB1468526A". Below the search bar, there are navigation links: "My Espacenet", "Help", "Classification search", "Results" (which is selected), and "Advanced". The main content area displays the patent details for GB1468526A. The title of the patent is "RESPIRATORY OR BREATHING DEVICE WITH MEA". The patent is categorized under "(54) RESPIRATORY OR BREATHING DEVICE WITH MEANS FOR ABSORBING CARBON DIOXIDE". The inventor listed is "I, BERNARD RICHARD PALUCH, a citizen of the United States of America, r". A note below states: "Data originating from sources other than the EPO may not be accurate, complete, or up to date".

Flag - ...her

2.6 Eye of the tiger

Goal: Our suspect appears to be quite the traveler. We aim to interview individuals in the areas she's visited and gather evidence confirming her presence.
Now, let's identify the place shown in the photo labeled "stone".

There is an interesting part at the bottom of the stone :

OSBM S6956

It seems to be a stone marking a [trig point in the UK](#). It was used to determine the exact shape of the country. A search on [trigpointing.uk](#) leads us to our target. We can check existing pictures to confirm that we have the right stone.

Search... Wiki Forum TrigTools MyTrigs

©Madam maxwell

1st Sep 2022 12:29 by [BarryHorton](#)

Not Logged Score: 5/10

By [Quadbarrel](#)

Flag - Eye of the tiger

2.7 Pray for me

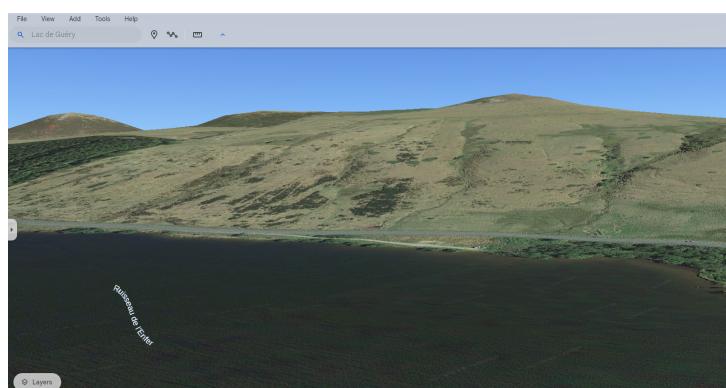

Goal: Our suspect appears to be quite the traveler. We aim to interview individuals in the areas she's visited and gather evidence confirming her presence.
Let's identify the lake shown in the photo labeled "lake".

Google reverse image search gives us the “Lac de Guéry” as a potential target:

Google Earth for checking mountains in the background (Puy de l'Ouire on the left):

Flag - Pray for me

2.8 Drop it like it's hot

Goal: Our suspect appears to be quite the traveler. We aim to interview individuals in the areas she's visited and gather evidence confirming her presence.

Now, let's determine the location from which the photo labeled "sea" was captured.

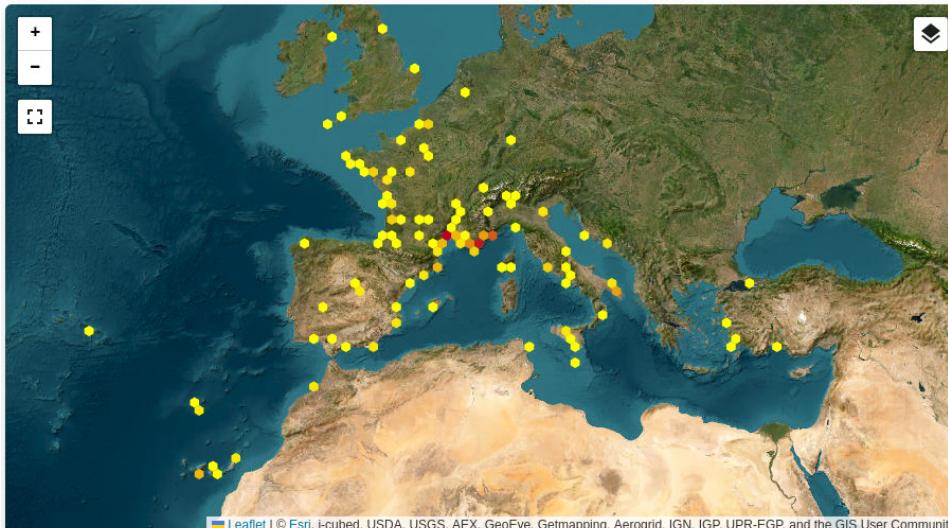

Let's make a quick Google image search:

A screenshot of a Google image search results page. The main image is a tall, yellow, spike-like flower structure. Below it, several smaller images show the same plant in different contexts, such as on a cliff overlooking the sea and in a garden setting. The search results include links to Flickr, Adobe, palmiersprestige.com, and plantnet.org, along with descriptions of the plant.

It seems that our search results may be influenced by our Google cache as we already see Barbara Allandes' Flickr account. Let's focus on other pictures.

It seems to be a [Dasylirion serratifolium](#). According to Plantnet (a plant identification website), it is mainly a European plant and it is quite popular in the French Riviera.

{width="50%"}

Let's search for "jardin exotique cote d'azur". The "Jardin Exotique d'Eze" is a good candidate as it appears several times in our case.

★★★★★ Note : 4,5 · 2 440 avis

Then, if we look in Google Street View, we can check the place and even buildings downstairs.

Flag - Drop it like it's hot

2.9 Welcome to the jungle

Goal : Our suspect appears to be quite the traveler. We aim to interview individuals in the areas she's visited and gather evidence confirming her presence. Now, let's determine the location from which the photo labeled "kangaroo" was captured.

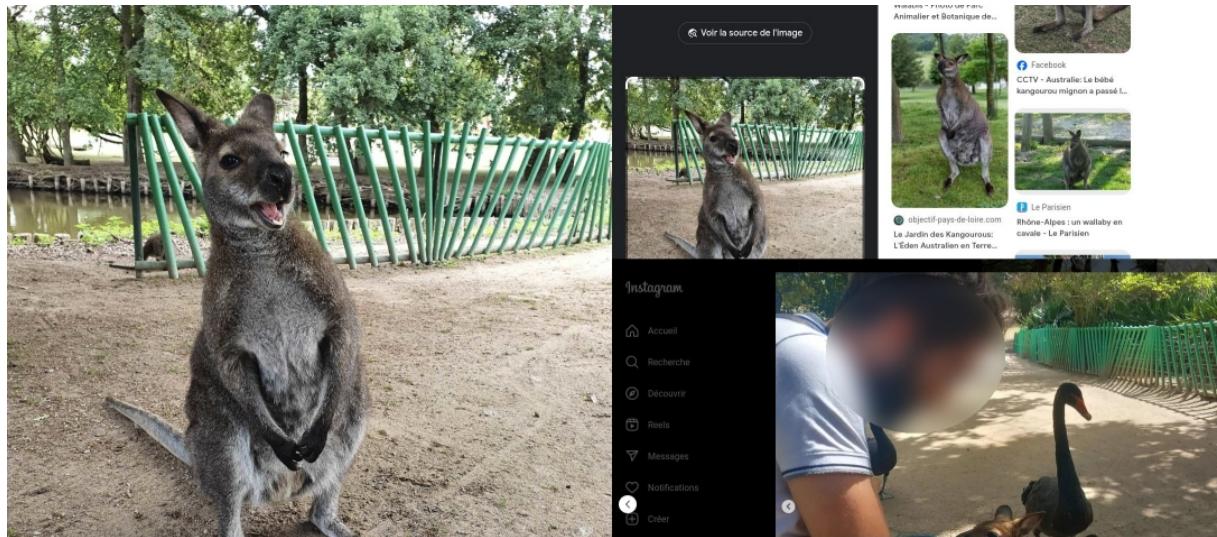

Image search through Google gave several (cute) kangaroos pictures and several parks/gardens... Tried the “Jardin des Kangourous” on Instagram until finding a picture with the same fence.

Flag - Welcome to the jungle

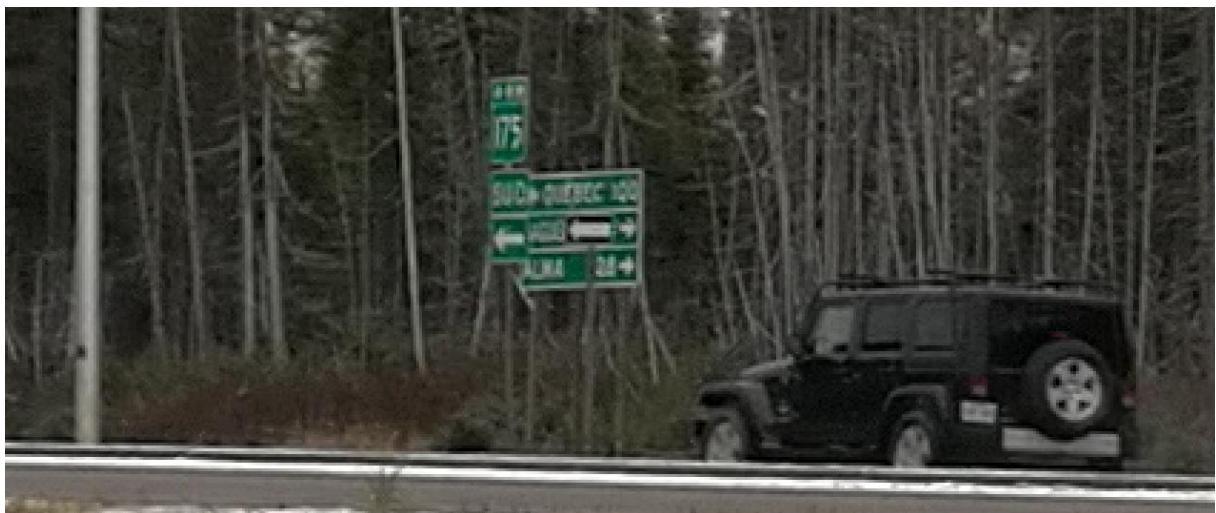

2.10 When I see you again

Goal: Our suspect appears to be quite the traveler. We aim to interview individuals in the areas she's visited and gather evidence confirming her presence.

Now, let's determine the location from which the photo labeled “snow” was captured.

We have some road signs:

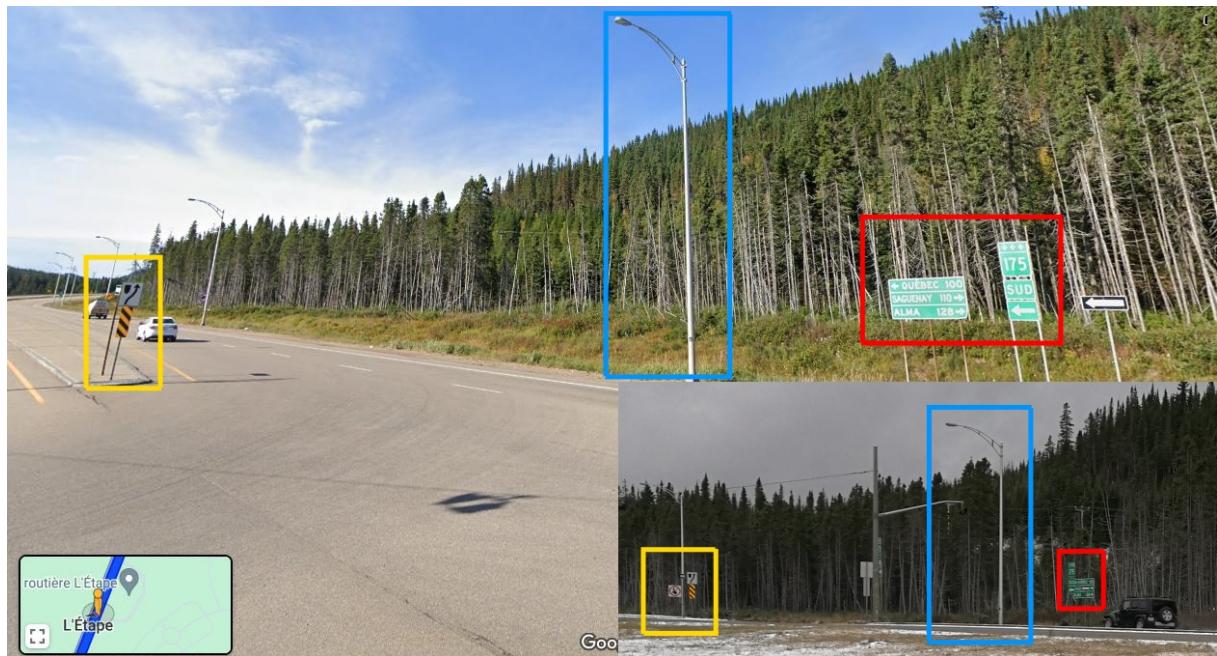

- Route 175.
- Québec: 100km to the South. We are in Québec, Canada !
- Alma: +120km to the North.
- The third city is not completely readable but we can see it's Saguenay after a quick check.

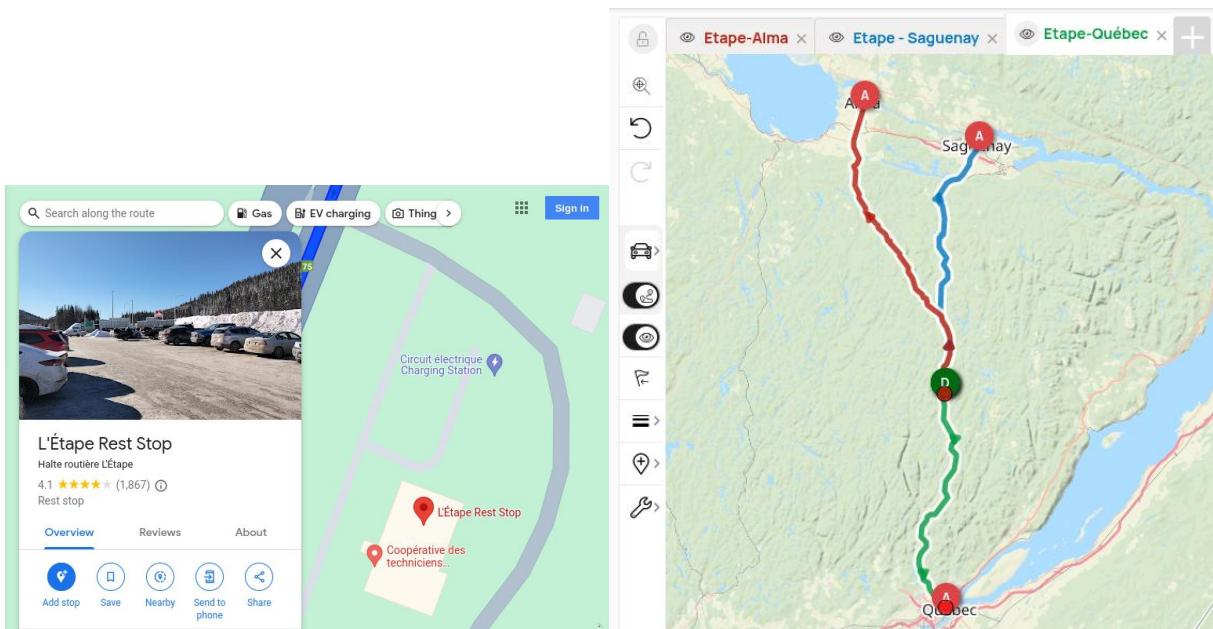

In other words, we are located somewhere on the 175 route in Québec. Here is an Overpass Turbo script to highlight this road and the main road going to Alma (route 169) as long as the map is around this area:

```
[out:json][timeout:25];
(
  way["ref"~"175"]({{bbox}});
  way["ref"~"169"]({{bbox}});
);
out body;
>;
out skel qt;
```

We are located somewhere below the fork of 169 and 175 routes, 100km north of Québec City, South direction on our left. The easiest way to find the point was to go through Google Street View.

We are basically at the Etape Rest Stop. Double check with a tool to draw the three roads (Etape-Alma, Etape-Saguenay and Etape-Québec).

Flag - When I see you again

2.11 Bolt to be alive

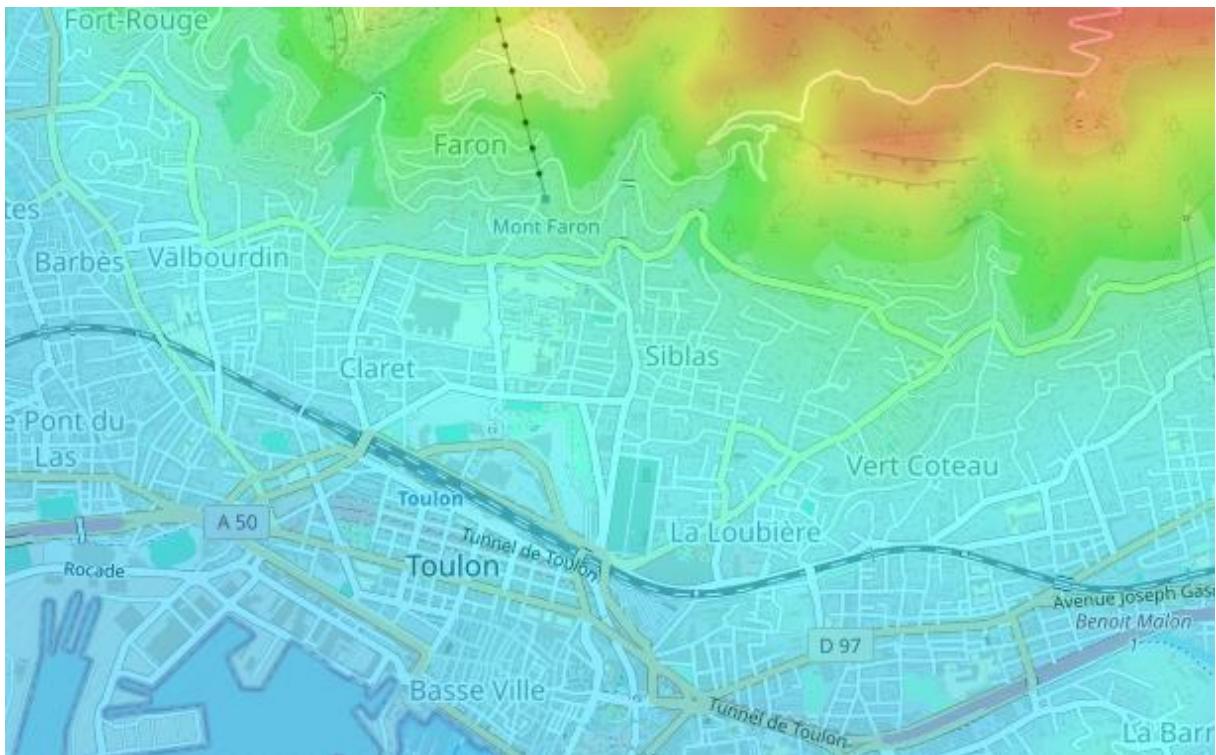

Goal: Our suspect appears to be quite the traveler. We aim to interview individuals in the areas she's visited and gather evidence confirming her presence. Now, let's identify the name of the road shown in the photo labeled "bridge".

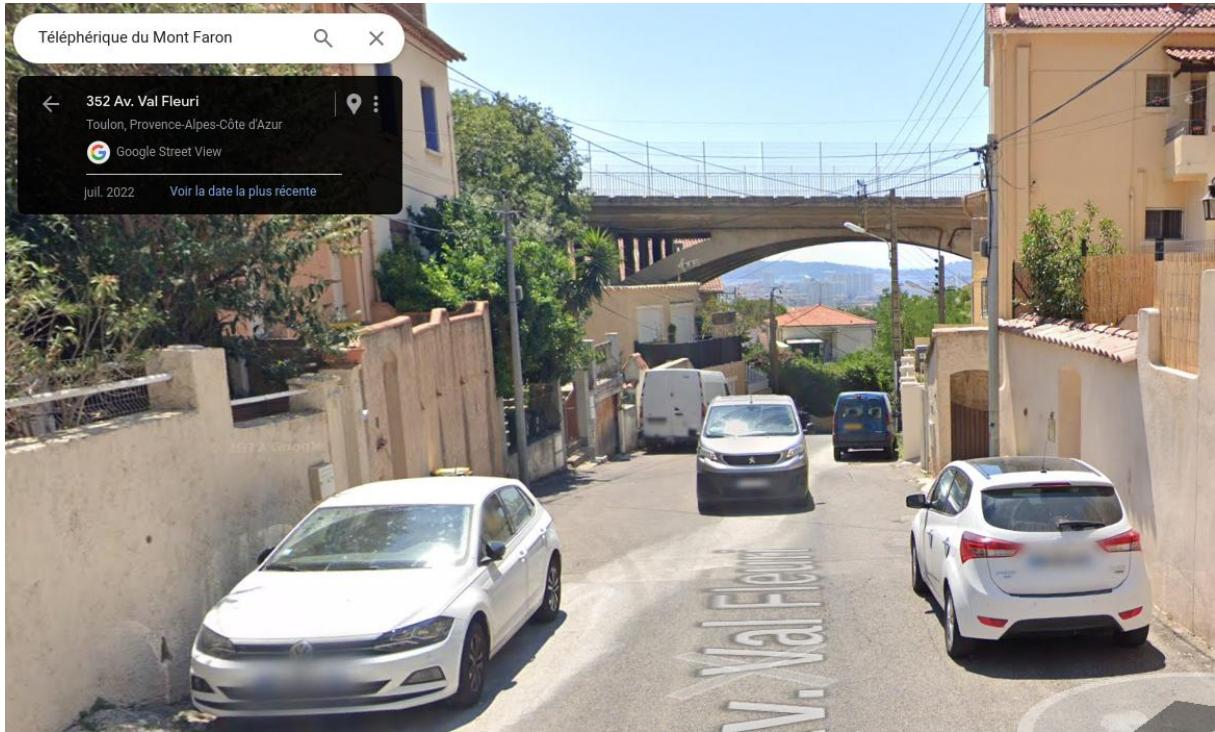

The main clue is the car plate. It seems to be department 83 (Var) or maybe 13 (Bouches-du-Rhône).

It seems to be quite a big city, uphill, near the sea with some forest in the background. It can't be Marseilles as the seafront doesn't look like this. Let's try Toulon, Var "capital city". We used a [topographic map](#) in order to find places uphill.

We noticed there's a cable car station at Mont Faron and we started from here. After a few minutes, we found a place with the same blue and white cars.

Flag - Bolt to be alive

2.12 Print it

Goal : We've recovered a crucial piece of evidence in possession of the victim: a business card among the items. We need to investigate the company's details, including its establishment date and any relevant information about its operations.

Maybe the first headache we had in this CTF... Reverse image search gave nothing. Main social networks didn't work until we found [this Facebook page](#):

The screenshot shows a Facebook page for 'Fildargent'. The profile picture is a circular logo featuring a stylized flame or drop design. The page name is 'Fildargent' with 1 like and 1 follower. Below the header are tabs for 'Publications', 'À propos', 'Mentions', 'Avis', 'Abonnements', 'Photos', and 'Plus'. The 'Publications' tab is selected. On the left, the 'Intro' section welcomes visitors to Fildargent Sewing Studio, mentioning custom couture and sewing classes, and includes links for 'Page - Mode et création' and an email address 'azlamp19@proton.me'. On the right, a post from March 15 shows a photo of a person's head and shoulders, with the caption: 'Quel acteur ! Je peux tout à fait m'imaginer en train de lui faire un costume, haha. C'est bon de rêver !' and a link to 'Voir l'original - Notez cette traduction'.

There's an email address: azlamp19@proton.me that will be useful later. A comment is saying it was their 2nd birthday on March 15:

A Facebook post from 'Fildargent' on March 15, 2024, with the caption: 'Fildargent 🎉 se sent festif.' It includes a link to 'Voir l'original - Notez cette traduction'. A comment from the author says: 'En ce beau rendez-vous, parlez-moi de vos créateurs de mode préférés ! Personnellement, je résonne complètement avec l'apparence de Karl.' Below the post are buttons for 'J'aime', 'Commenter', and 'Partager'. A reply from the author on March 15 says: 'And for those wondering, yes, it's a good date because today we celebrate the 2nd anniversary of the creation of FilDargent ! 😊' with a link to 'Voir la traduction'.

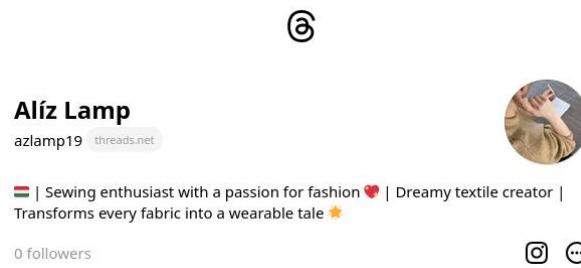

Flag - Print it

2.13 Name it

Goal: Now that we uncovered information about this company, I task you with the next crucial step: identifying the individual who leads this company.

This challenge needs information from **Print it**.

Found the username (first part of the email) on [Instagram](#) and [Threads](#).

Flag - Name it

2.14 Drop it

Goal: It appears that the suspect has been ordering goods, which opens up a promising avenue for our investigation. Let's focus on tracing these transactions and gathering any relevant information related to the purchases made by the suspect. format : LastTrackedCityForContainer

Two screenshots illustrating the investigation process. The left screenshot shows a delivery tracking interface with a blue checkmark icon and the status "Out for delivery". It lists the origin as "Mainland China" and the destination as "France". A red circle highlights the timestamp "2023-06-27 08:11:00 GMT+2" with three exclamation marks above it. The right screenshot shows a container tracking website for container ID TCNU657202. It displays the container's last tracked location in Antwerp, BE, marked as "DELIVERED". The timestamp "13 Jun 2023 08:40" is also visible.

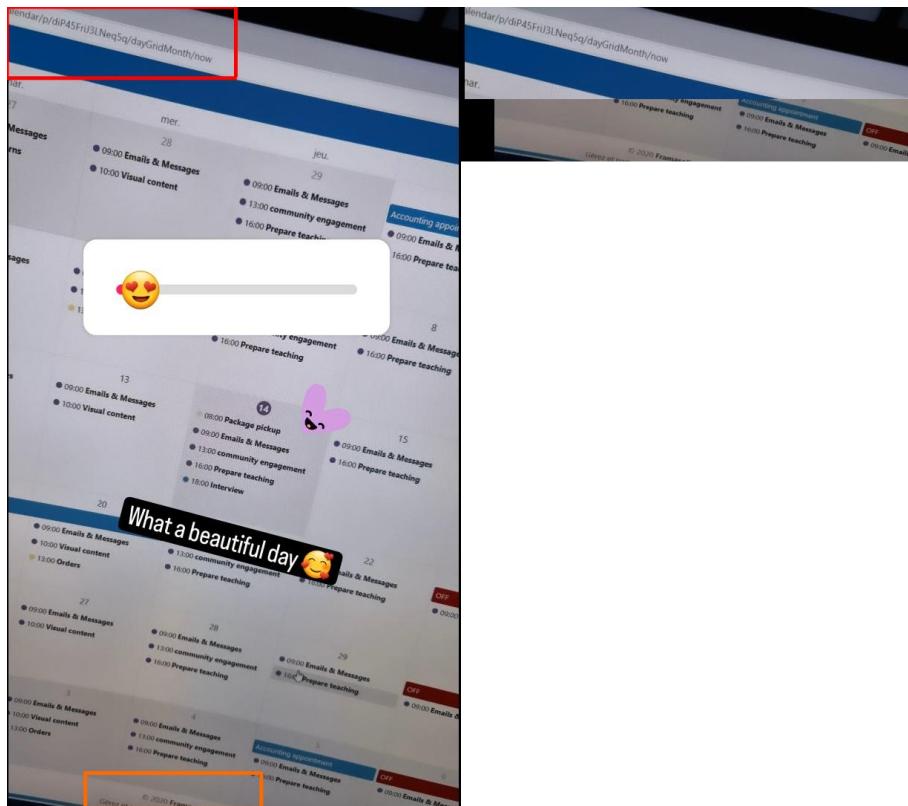

We can see a container ID in a Threads message. We found a [container tracking website](#) to find the last tracked city.

Flag - Drop it

2.15 Around it

Goal : This individual who heads ‘fildargent’ the company affiliated with the business card found at the crime scene is a suspect. To further investigate her involvement, we need to verify her alibi.

Your task is to determine the city where this person was supposed to be during the period of the incident.

There is an Instagram story with a screenshot of a calendar:

- The `dayGridMonth` keyword in the URL indicates it is a [Nextcloud instance](#).
- In the footer, we can see [Frama***](#) like Framasoft and their agenda [Framagenda](#).

Now, we just need to type the URL to get access to a [public calendar](#).

Trip
13 days ago

● Personal (alizlamp)

from 04/04/2024 to 13/04/2024

Details	Attendees
AF0328	

There is a flight number on [April 4](#). We assume our target was in the city where the plane landed.

Flag - Around it

2.16 Move it

Goal: Our objective is to verify whether the suspect did indeed visit the locations as planned. We need to gather evidence to confirm or refute her presence at the designated places. It seems that on April 8th, there was a change in her whereabouts. Please locate a telephone number for the accommodation where she likely stayed during this time.

This challenge needs information from [Around it](#).

Moving
9 days ago

● Personal (alizlamp)

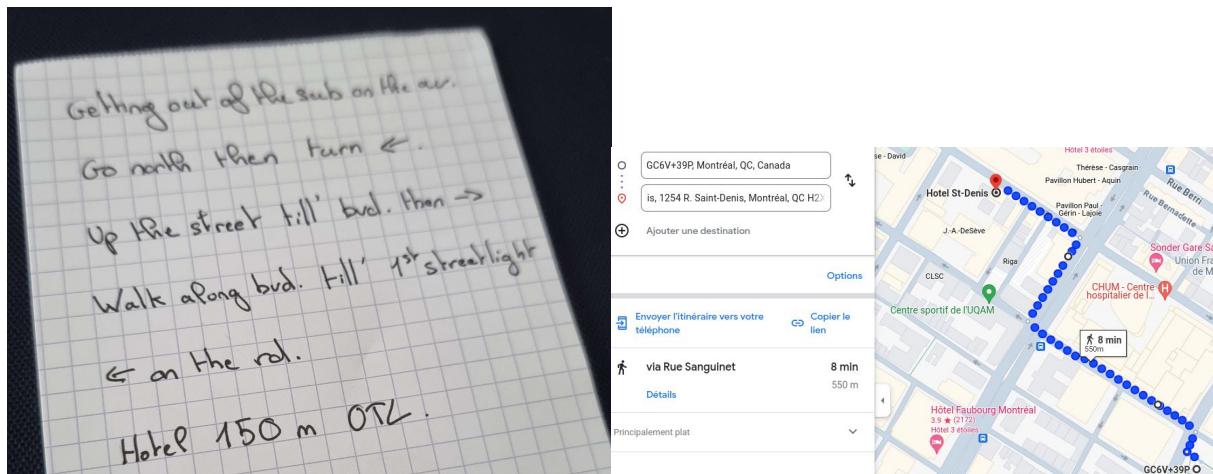

from 08/04/2024 at 08:00 to 08/04/2024 at 11:00

Details	Attendees
GC6V+39P	
Framagenda share link: s/YdjE5jpFn4kwSn8	

Same calendar, “Moving” event on April 8:

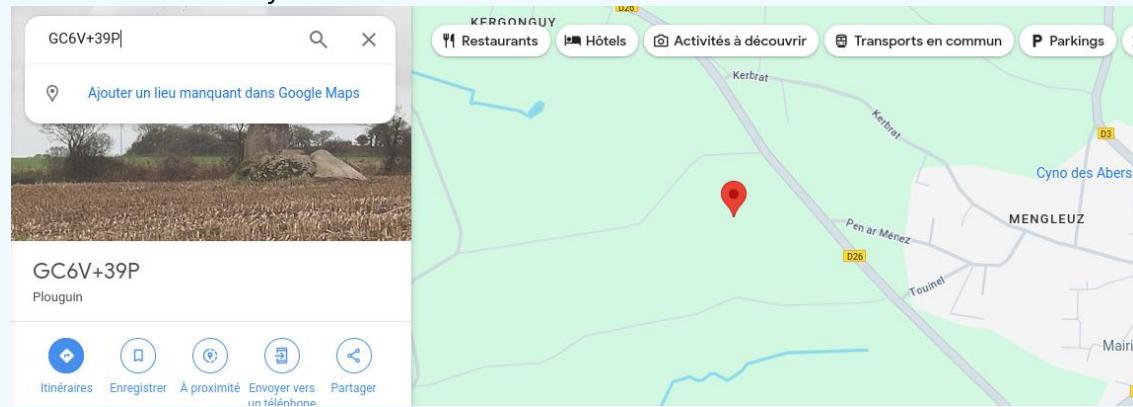

- A [Google Plus code: GC6V+39P](#).
- A [Framagenda share link: s/YdjE5jpFn4kwSn8](#).

The share link contains a note with indications to find the hotel from the Google Plus code which is close to a subway station:

It leads us to the Hotel St-Denis.

Note: do not simple type the Google Plus code in Maps as it will give you a point in the middle of nowhere in Brittany.

Flag - Move it

2.17 Supply...

Goal: The recovery of Lucilhe's encrypted phone marks a pivotal breakthrough in our investigation. Our dedicated technicians are tirelessly working to extract vital data from it. Thus far, we have successfully retrieved screenshots from a conversation. Herein lies the first segment of this crucial exchange. Try to find the SIRET number of the company mentioned in the message.

aka the Bee challenge. The chill mode was used there.

The main challenge was to create a good Google query.

```
honeycomb filetype:pdf before:2013
```

A link gave us a link to a scientific paper. Then, to the company page on societe.com.

Flag - Supply...

2.18 Paint her

Goal: After rigorous effort and intricate analysis, the forensics team successfully decrypted the notes stored within the telephone. Here's one of the notes we discovered:

Here is what I found about them : They think art is a waste, but can be useful to make money. Here is their next target, they want to steal it and sell it on black market

Your assistance is crucial in our investigation. We rely on you to uncover the name of that painting, as it holds crucial significance in identifying their targets.

TinEye got it right with a single result. Website is not online but we manage to get [another link](#).

- 6. Santa Fe man accus four years

Flag - Paint her

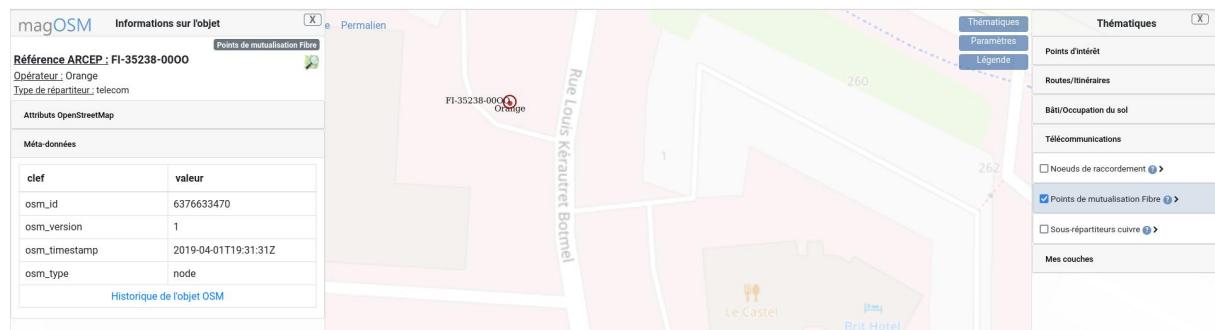

2.19 Connect her

Goal: After rigorous effort and intricate analysis, the forensics team successfully decrypted the notes stored within the telephone. Here's one of the notes we discovered:

- Address: 263 Rue de Châteaugiron, 35000 Rennes, France
- Use: Datacenter/communications
- Responsible: Marine Scout
- Affiliation: Indigo

The described facility seems important because of its intended use. We require it to establish a means of surveillance. Find the OSM node of the fiber concentration point linked to this place.

We found an interesting dataset with fiber concentration points on data.gouv.fr. Then, we can visualize this data on MagOSM. We tried the closest point to the address given in the challenge.

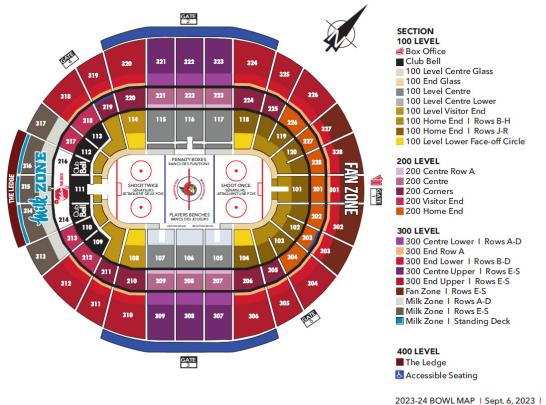

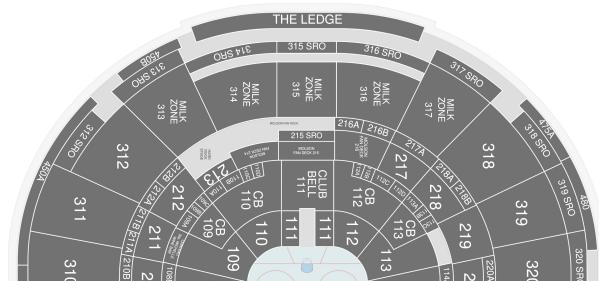

Flag - Connect her

2.20 Milk it

Goal: Our objective is to verify whether the suspect did indeed visit the locations as planned. We need to gather evidence to confirm or refute her presence at the designated places. Our next step is to gather information about the event she attended on April 6th. Let's delve into any available details regarding this event.

1000 Palladium Drive, Kanata, ON K2V 1A5 is the address of the Canadian Tire Center, a big arena in Ottawa, Canada. On April 6, a hockey game happened.

"The ledge" is the name of a part of the area. With the other map, we can see where is the West direction. There are two little traps with this challenge:

- The arena configuration for hockey games is a bit different and includes suites on the fourth level.
- During the CTF, from Saturday night, there were no games happening in Ottawa for several days. It was more complicated to identify suites on the live map.

Flag - Milk it

2.21 Propel her

Goal :

After rigorous effort and intricate analysis, the forensics team successfully decrypted the notes stored within the telephone. Here's one of the notes we discovered:

I've recognized a military aircraft equipped with dual propellers, three landing gears, with one positioned beneath the nose, wings affixed to the fuselage midpoint, a horizontal stabilizer attached to the rear fuselage and a unique vertical stabilizer. It's quite sizable, measuring over 30 meters in length. todo : identify plane It appears that they possess considerable resources.

Please identify the airplane type. We would like to question the owners of such an airplane.

The chill mode was used here.

An admin gave us a very good hint. Basically, the idea wasn't to search the solution by ourselves (AI assistant are pretty bad for identifying planes) but rather find a guide where we can selected filters with the description given in the challenge: <https://www.aircraftrecognitionguide.com/identify-aircraft/identify-by-airplane-characteristics>. The Breguet Br1150 is the good answer.

Flag - Propel her

2.22 Drive her

Goal: Our forensic team has achieved a new breakthrough, successfully extracting a video from the phone. To ascertain the identity of the individual speaking in the video, we aim to reach out to potential witnesses who might have encountered him.

Please find the phone number of a location where this person is likely to have passed through.

The challenge contains a video. We can see that we are at KM357 of A20 highway in France.

With [this tool](#), we can see the zone.

For the Japanese voice, we used an [online translator](#). The guy says “I am very hungry. Stop by the Question and Answer Break!”. We assume he will stop at the next station. The [Aire Jardin des Causses du Lot](#) is the answer.

Flag - Drive her

2.23 Sum her

Goal: The technicians have successfully retrieved a photo from the phone. It seems to be about a location. please attempt to locate this place.

The exact place was located more or less located manually (at least a Maps filter for hotels or cemeteries). We assume it could have been done with an Overpass Turbo query.

Flag - Sum her

2.24 Lead her

Goal: Our forensics team managed to decrypt everything kept in that telephone. We learned more about the organization that ordered to kill Lucilhe in 2023.

Unfortunately, the evidence we've found hasn't yet enabled us to confirm whether they are implicated or not. We will keep you informed if a new lead comes up...

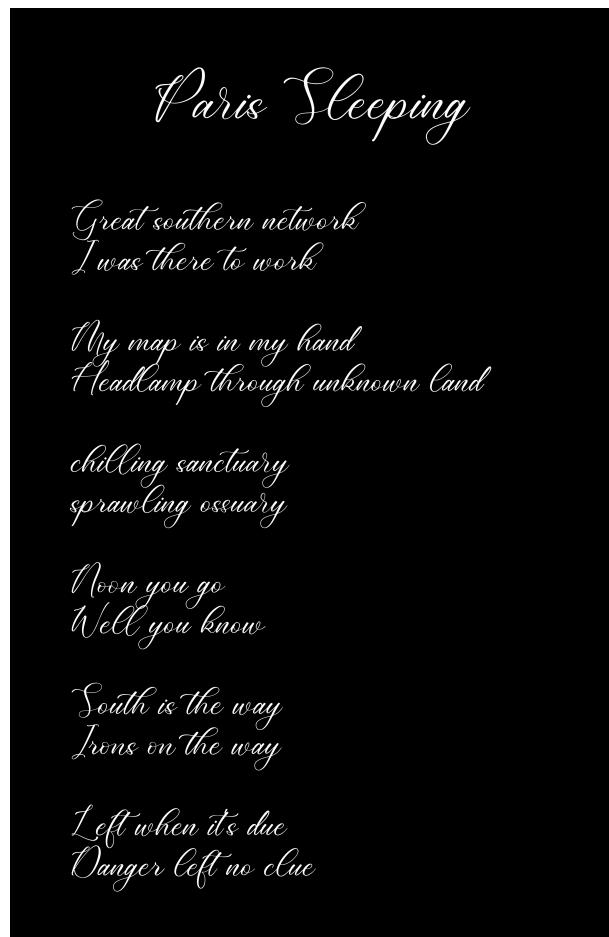

flag : Roger that

Flag - Lead her

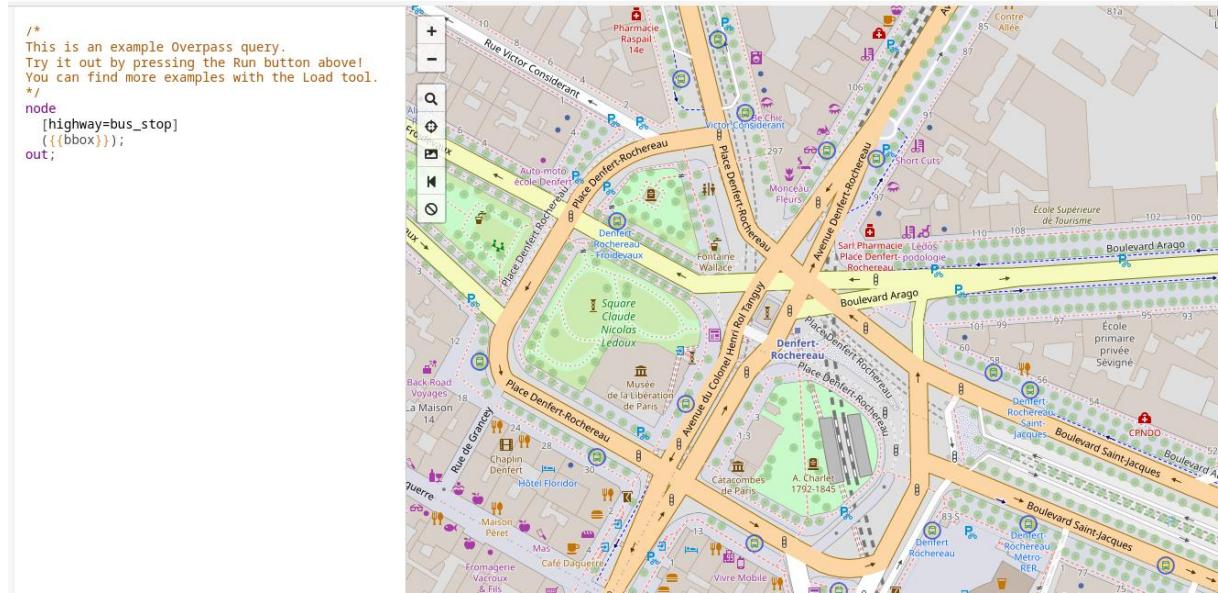

2.25 Santiano

Goal: Our suspect appears to be quite the traveler. We aim to interview individuals in the areas she's visited and gather evidence confirming her presence.

Now, let's determine the location described by the poem. It seems that the words have been chosen carefully. If we pay close attention, we may uncover something of interest.

The poem is basically a description of Paris catacombs, located near Denfert-Rochereau. It's in the South with a subway/RER station. We flagged this challenge a few minutes before the end, randomly as we had 5 tries for this challenge.

Flag - Santiano

2.26 Little party never kill nobody

Goal : You found critical information in this investigation. We've sent people at the location you found, and they found a bundle of clues: an abandoned lab in Scotland, a french witness that says Barbara Allandes is a pharmacist, a burnt notebook with poison recipes, a crop of castor bean...

B. Allandes seems to be our ideal suspect, but we do not have a formal proof. We need to investigate further, but for now, we do not have much. We'll keep you updated if anything new comes up...

flag : Roger that

Flag - Little party never kill nobody
